User Experience Design Intern

The unique culture at Universal Mind seeks the most innovative and talented people across the globe, providing a flexible and collaborative work environment that most of our competitors don’t. Each individual is responsible for the delivery of their tasks, while closely working with a small team on the solution. Due to this distributed business model, we are not only seeking candidates who share a passion for design and technology, but one that can be self-sufficient in reaching out to the team to build upon skills that meet personal objectives over the course of the internship.

We value our interns and are committed to creating an experience at Universal Mind that aligns to your career goals. Over the 12-week program, you will become extremely knowledgeable with the latest in multi-device platforms and develop a deep understanding of how a project is generated from concept to completion. You will work in a professional environment that allows you to build a network with our team of industry leaders.

What you will learn:

- To design user interactions on the latest technologies.
- How to conceptualize workflows, user interfaces, and applications following our unique user experience process.
- The creation of a working prototype through design and wireframes.
- Assisting a technologist in the generation of digital assets.
- How to conduct and participate in virtual meetings utilizing Skype, Google Hangouts, Uber Conference, etc.
- Collaborate with a team of user experience specialists, designers, and technologists as well as the management of your time and tasks on a project with delivery managers.
- Participate in brainstorm sessions and/or discussions around various projects.
- Perform studies in the areas of content, typography for multiple devices, interaction, color, and brand.
- How to create a responsive design platform.
- Basic HTML, CSS, and other languages to a level that allows you to verbally collaborate solutions with a developer.

What we require:
• Background in graphic, interaction, experience or industrial design (with a focus on technology – web and devices).
• Strong communication skills.
• Ability to ask questions and voice opinions in the collaborative process.
• Proficient in Adobe Creative Suite (Sketch a plus).
• Organized, with an ability to prioritize time-sensitive assignments.
• Creative and can adapt to new technologies.
• Forward thinking, self-motivated and passionate about design.
